

Monash University Procedure

Procedure Title	Electronic Information Security: Payment Card Industry Data Security Standards (PCI-DSS) Procedures (Australia only)
Parent Policy	Electronic Information Security Policy
Date Effective	12-September-2012
Review Date	12-September-2015
Procedure Owner	Chief Information Officer
Category	Operational
Version Number	1.1
Content Enquiries	its-sd@monash.edu
Scope	All campuses in Australia Monash South Africa Monash College Pty Ltd All staff All students
Purpose	<p>The Payment Card Industry Data Security Standards (PCI-DSS) are a set of guidelines developed by MasterCard, Visa, American Express, Discover and JCB International to assist merchants in preventing payment card fraud and to improve security around processing and storing payment card details. Any company processing, storing or transmitting the above branded payment card numbers must be PCI-DSS compliant or they risk losing the ability to process these payments.</p> <p>Monash University is required to be compliant with the PCI-DSS. Non-compliance can result in fines to merchants of at least \$10,000 per month and \$500,000 per card brand (eg Visa, MasterCard) if there is a data breach.</p>
PROCEDURE STATEMENT	

PCI DSS Compliance

PCI Compliance has been required since December 2010.

These procedures are designed to deal with situations where a company or individual provides their cardholder data to the University for the purposes of paying an account (of any type).

Under PCI DSS requirements, Monash University is required to use, store and destroy cardholder data in a manner which protects the cardholder data from misuse or unauthorised transactions.

Monash University Procedure

Responsibility

All Staff

1. Companies and individuals must be prevented from providing any cardholder data via an email or VoIP facsimile.

If such a request is received:

- The email or VoIP fax should be replied to immediately with the credit card number deleted - stating that "Monash University does not accept payment card holder information via VoIP fax or email as it is not a secure method of transmitting cardholder data".
- The email or fax is to be securely destroyed.

Responsibility

All Staff

2. Minimal cardholder data is to be stored in hard copy format. There must be a legitimate business need to store cardholder data. Any cardholder data that is stored in hard copy must be stored in a highly secure and protected manner within a locked filing cabinet or safe within a locked office.

Responsibility

All Staff

3. Cardholder data is not to be stored, processed, or transmitted on Monash University computers in any form unless an exception has been approved by the eSolutions IT Security and Risk Manager. If cardholder data is stored, processed, or transmitted as electronic data, appropriate security measures must be utilised in accordance with PCI DSS. This may include but is not limited to:
 - Reducing the scope of PCI DSS compliance by segmenting the CDE network.
 - Segmenting payment card processing from the normal business use of workstations and using separate physical devices or virtual machines on a secure host.
 - Restricting access to the hosts that store cardholder data to systems that have a legitimate business need to access the data.
 - Separating duties of servers such that a web server in the CDE is not also running a database server.
 - Installing a stateful packet inspection firewall in the CDE and ensuring that the firewall has both ingress and egress rules.
 - Collecting logs from all devices in the CDE and shipping them to a centralised, backed up logging server.
 - Performing internal and external vulnerability scanning at least quarterly or when configurations change, and performing an internal and external penetration test at least annually. External scans will need to be performed by a PCI approved scanning vendor.
 - Ensuring that physical access to systems in the CDE is restricted to those individuals with a legitimate business need and all server consoles are locked or logged off.

Responsibility

All Staff

Monash University Procedure

4. All EFTPOS machines and other such devices used to collect cardholder data must be either on a tamper proof stand or stored securely (particularly when not in use, eg overnight). Tamper evident stickers across the seams of the EFTPOS terminals should also be used if available.

Responsibility

All Staff

5. Only appropriate staff may have access to cardholder data, and appropriate training for such staff is to be conducted on an annual basis. All staff who handle cardholder data will be required to sign an acknowledgement of understanding and compliance with this policy.

Responsibility

All Staff who handle cardholder data

6. Cardholder information is to be transferred securely. Therefore, no cardholder data is to be emailed or VoIP faxed either internally or externally between staff or customers (the only exception being if a direct line/analogue facsimile has been specifically installed for this purpose).

Responsibility

All Staff

7. All service providers and third party vendors providing payment card related services for Monash University must be PCI DSS compliant.

Responsibility

All Staff

8. Cardholder data is not be stored simply for chargeback purposes. Storing the first six and last four digits of a cardholder number, along with time, date, transaction identification and amount is adequate. Cardholder data is not to be retained for longer than six months after the date of processing the transaction.

Responsibility

All Staff

9. When there is no need to retain hard copy cardholder data, the cardholder data must be destroyed using at least one of the following methods: cross cut shredding, incinerating, or pulping. (Eg the portion of the form that contains the cardholder data can be cut out and shredded or the entire form can be shredded.)

Responsibility

All Staff

10. Payment card security codes (CVV2, CVC2, CID etc) are not to be stored or recorded under any circumstances once a transaction has been processed.

Responsibility

All Staff
